ABSTRACT

A compound of formula (I)

wherein  $\text{R}^1$  and  $\text{R}^2$  each represents a hydrogen atom or an alkyl group, Z represents a ring selected from:

in which  $n$  represents 4, 5 or 6;

in which  $\text{R}^3$  represents hydrogen or an alkyl group and  $\text{R}^4$  represents an alkyl, methoxy, benzyl or  $\text{R}^5\text{NHCO}$  group,  $\text{R}^5$  being an alkyl group; and

in which  $\text{R}^6$  represents an alkyl group.

and pharmaceutically acceptable salts thereof are useful in the treatment of migraine and other conditions. They are prepared by decarboxylation of the corresponding indolyl 2-carboxylic acid.
